

Select operations in SQL

Various select operations are possible in SQL

1. Selecting rows
2. Selecting columns
3. Selecting rows and columns
4. Updating rows and columns

Selecting rows: Selecting rows by condition

Identify transactions greater than \$100

Customer	TransDate	Quantity	PurchAmount	Cost
149332	15-11-05 00:00	1	199.95	107.00
172951	29-08-08 00:00	1	199.95	108.00
120621	19-10-07 00:00	1	99.95	49.00
149236	14-11-05 00:00	1	39.95	18.95
149236	12-06-07 00:00	1	79.95	35.00
...

Select rows where
PurchAmount >
100

Customer	TransDate	Quantity	PurchAmount	Cost
149332	15-11-05 00:00	1	199.95	107.00
172951	29-08-08 00:00	1	199.95	108.00
...

R data.table

```
transactions[PurchAmount > 100, ]
```

R data.table method ¹

SQL in R

```
dbGetQuery(con, "SELECT * FROM transactions  
WHERE PurchAmount > 100;")
```

² WHERE specifies the condition,
which rows to select.

Selecting rows: Selecting rows by condition

Identify transactions greater than \$100

Customer	TransDate	Quantity	PurchAmount	Cost
149332	15-11-05 00:00	1	199.95	107.00
172951	29-08-08 00:00	1	199.95	108.00
120621	19-10-07 00:00	1	99.95	49.00
149236	14-11-05 00:00	1	39.95	18.95
149236	12-06-07 00:00	1	79.95	35.00
...

Select rows where
PurchAmount >
100

Customer	TransDate	Quantity	PurchAmount	Cost
149332	15-11-05 00:00	1	199.95	107.00
172951	29-08-08 00:00	1	199.95	108.00
...

R data.table

```
transactions[PurchAmount > 100, ]
```

R data.table method ¹

SQL in R

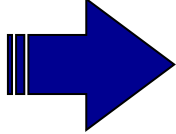

```
dbGetQuery(con, "SELECT * FROM transactions  
WHERE PurchAmount > 100;")
```

² WHERE specifies the condition,
which rows to select.

Selecting columns: Select multiple columns by column name

Customer	TransDate	Quantity	PurchAmount	Cost
149332	15-11-05 00:00	1	199.95	107.00
172951	29-08-08 00:00	1	199.95	108.00
120621	19-10-07 00:00	1	99.95	49.00
149236	14-11-05 00:00	1	39.95	18.95
149236	12-06-07 00:00	1	79.95	35.00
...

Select rows where PurchAmount > 100

Customer	TransDate	PurchAmount
149332	15-11-05 00:00	199.95
172951	29-08-08 00:00	199.95
120621	19-10-07 00:00	99.95
149236	14-11-05 00:00	39.95
149236	12-06-07 00:00	79.95
...

R data.table `transactions[,list(Customer, TransDate, PurchAmount)]`

SQL in R `dbGetQuery(con, "SELECT Customer, TransDate, PurchAmount
FROM transactions;")`

Specifies the columns that are queried after SELECT

Selecting rows and columns: Combine operations to select by row and column

Customer	TransDate	Quantity	PurchAmount	Cost
149332	15-11-05 00:00	1	199.95	107.00
172951	29-08-08 00:00	1	199.95	108.00
120621	19-10-07 00:00	1	99.95	49.00
149236	14-11-05 00:00	1	39.95	18.95
149236	12-06-07 00:00	1	79.95	35.00
...

Select rows where
PurchAmount >
100

TransDate	Cost
15-11-05 00:00	107.00
29-08-08 00:00	108.00
...	...

R data.table `transactions[PurchAmount > 100, list(TransDate, Cost)]`

SQL in R `dbGetQuery(con, "SELECT TransDate, Cost
FROM transactions
WHERE PurchAmount > 100;")`

Updating rows and columns: Appending rows into a table (1/2)

transactions

Customer	TransDate	Quantity	PurchAmount	Cost
149332	15-11-05 00:00	1	199.95	107.00
172951	29-08-08 00:00	1	199.95	108.00
120621	19-10-07 00:00	1	99.95	49.00
149236	14-11-05 00:00	1	39.95	18.95
149236	12-06-07 00:00	1	79.95	35.00
...

Customer	TransDate	Quantity	PurchAmount	Cost
149332	15-11-05 00:00	1	199.95	107.00
172951	29-08-08 00:00	1	199.95	108.00
120621	19-10-07 00:00	1	99.95	49.00
149236	14-11-05 00:00	1	39.95	18.95
149236	12-06-07 00:00	1	79.95	35.00
...
80801	19.09.2014	1	89.95	29.30

New row

Customer	TransDate	Quantity	PurchAmount	Cost
80801	19-09-14 00:00	1	89.95	29.30

Updating rows and columns: Appending rows into a table (1/2)

transactions

Customer	TransDate	Quantity	PurchAmount	Cost
149332	15-11-05 00:00	1	199.95	107.00
172951	29-08-08 00:00	1	199.95	108.00
120621	19-10-07 00:00	1	99.95	49.00
149236	14-11-05 00:00	1	39.95	18.95
149236	12-06-07 00:00	1	79.95	35.00
...

Customer	TransDate	Quantity	PurchAmount	Cost
149332	15-11-05 00:00	1	199.95	107.00
172951	29-08-08 00:00	1	199.95	108.00
120621	19-10-07 00:00	1	99.95	49.00
149236	14-11-05 00:00	1	39.95	18.95
149236	12-06-07 00:00	1	79.95	35.00
...
80801	19.09.2014	1	89.95	29.30

New row

Customer	TransDate	Quantity	PurchAmount	Cost
80801	19-09-14 00:00	1	89.95	29.30

Updating rows and columns: Appending rows into a table (1/2)

transactions

Customer	TransDate	Quantity	PurchAmount	Cost
149332	15-11-05 00:00	1	199.95	107.00
172951	29-08-08 00:00	1	199.95	108.00
120621	19-10-07 00:00	1	99.95	49.00
149236	14-11-05 00:00	1	39.95	18.95
149236	12-06-07 00:00	1	79.95	35.00
...

Customer	TransDate	Quantity	PurchAmount	Cost
149332	15-11-05 00:00	1	199.95	107.00
172951	29-08-08 00:00	1	199.95	108.00
120621	19-10-07 00:00	1	99.95	49.00
149236	14-11-05 00:00	1	39.95	18.95
149236	12-06-07 00:00	1	79.95	35.00
...
80801	19.09.2014	1	89.95	29.30

New row

Customer	TransDate	Quantity	PurchAmount	Cost
80801	19-09-14 00:00	1	89.95	29.30

Updating rows and columns: Appending rows into a table (1/2)

transactions

Customer	TransDate	Quantity	PurchAmount	Cost
149332	15-11-05 00:00	1	199.95	107.00
172951	29-08-08 00:00	1	199.95	108.00
120621	19-10-07 00:00	1	99.95	49.00
149236	14-11-05 00:00	1	39.95	18.95
149236	12-06-07 00:00	1	79.95	35.00
...

New row

Customer	TransDate	Quantity	PurchAmount	Cost
80801	19-09-14 00:00	1	89.95	29.30

Customer	TransDate	Quantity	PurchAmount	Cost
149332	15-11-05 00:00	1	199.95	107.00
172951	29-08-08 00:00	1	199.95	108.00
120621	19-10-07 00:00	1	99.95	49.00
149236	14-11-05 00:00	1	39.95	18.95
149236	12-06-07 00:00	1	79.95	35.00
...
80801	19.09.2014	1	89.95	29.30

Updating rows and columns: Appending rows into a table (2/2)

R data.table

```
rbind(transactions, data.table(Customer=80801, TransDate="2014-09-19 00:00", Quantity=1, PurchAmount=89.95, Cost=29.30, TransID=227998739, TransKey=40000))
```

1
INSERT INTO specifies the relevant table and columns. For missing columns, SQL will automatically insert NAs.

SQL in R

```
dbGetQuery(con, "INSERT INTO transactions(Customer, TransDate, Quantity, PurchAmount, Cost, TransID, TransKey)
```

2
VALUES specifies the data that should be appended

```
VALUES (80801, '2014-09-19 00:00', 1, 89.95, 29.30, 227998739, 40000);")
```

*NOTE: the output "data frame with 0 columns and 0 rows" in the R console can be safely ignored.

Updating rows and columns: Appending rows into a table (2/2)

R data.table

```
rbind(transactions, data.table(Customer=80801, TransDate="2014-09-19 00:00", Quantity=1, PurchAmount=89.95, Cost=29.30, TransID=227998739, TransKey=40000))
```

1
INSERT INTO specifies the relevant table and columns. For missing columns, SQL will automatically insert NAs.

SQL in R

```
dbGetQuery(con, "INSERT INTO transactions(Customer, TransDate, Quantity, PurchAmount, Cost, TransID, TransKey) VALUES (80801, '2014-09-19 00:00', 1, 89.95, 29.30, 227998739, 40000);")
```

2
VALUES specifies the data that should be appended

*NOTE: the output "data frame with 0 columns and 0 rows" in the R console can be safely ignored.

Updating rows and columns: Appending rows into a table (2/2)

R data.table

```
rbind(transactions, data.table(Customer=80801, TransDate="2014-09-19 00:00", Quantity=1, PurchAmount=89.95, Cost=29.30, TransID=227998739, TransKey=40000))
```

1 INSERT INTO specifies the relevant table and columns. For missing columns, SQL will automatically insert NAs.

SQL in R

```
dbGetQuery(con, "INSERT INTO transactions(Customer, TransDate, Quantity, PurchAmount, Cost, TransID, TransKey)
```

2 VALUES specifies the data that should be appended

```
VALUES (80801, '2014-09-19 00:00', 1, 89.95, 29.30, 227998739, 40000);")
```

*NOTE: the output "data frame with 0 columns and 0 rows" in the R console can be safely ignored.

Updating rows and columns: Appending rows into a table (2/2)

R data.table

```
rbind(transactions, data.table(Customer=80801, TransDate="2014-09-19 00:00", Quantity=1, PurchAmount=89.95, Cost=29.30, TransID=227998739, TransKey=40000))
```

1
INSERT INTO specifies the relevant table and columns. For missing columns, SQL will automatically insert NAs.

SQL in R

```
dbGetQuery(con, "INSERT INTO transactions(Customer, TransDate, Quantity, PurchAmount, Cost, TransID, TransKey)
```

2
VALUES specifies the data that should be appended

```
VALUES (80801, '2014-09-19 00:00', 1, 89.95, 29.30, 227998739, 40000);")
```

*NOTE: the output "data frame with 0 columns and 0 rows" in the R console can be safely ignored.

Updating rows and columns: Appending rows into a table (2/2)

R data.table

```
rbind(transactions, data.table(Customer=80801, TransDate="2014-09-19 00:00", Quantity=1, PurchAmount=89.95, Cost=29.30, TransID=227998739, TransKey=40000))
```

1
INSERT INTO specifies the relevant table and columns. For missing columns, SQL will automatically insert NAs.

SQL in R

```
dbGetQuery(con, "INSERT INTO transactions(Customer, TransDate, Quantity, PurchAmount, Cost, TransID, TransKey)
```

2
VALUES specifies the data that should be appended

```
VALUES (80801, '2014-09-19 00:00', 1, 89.95, 29.30, 227998739, 40000);")
```

*NOTE: the output "data frame with 0 columns and 0 rows" in the R console can be safely ignored.

Updating rows and columns: Adding columns to a table

Customer	TransDate	Quantity	PurchAmount	Cost
149332	15-11-05 00:00	1	199.95	107.00
172951	29-08-08 00:00	1	199.95	108.00
120621	19-10-07 00:00	1	99.95	49.00
149236	14-11-05 00:00	1	39.95	18.95
149236	12-06-07 00:00	1	79.95	35.00
...

Add column
NewCol

Customer	...	PurchAmount	Cost	NewCol
149332	...	199.95	107.00	107
172951	...	199.95	108.00	108
120621	...	99.95	49.00	49
149236	...	39.95	18.95	19
149236	...	79.95	35.00	35
...

R data.table `transactions[, NewCol := round(Cost)]`

1
First, add a new, empty column to the table with the ALTER TABLE & ADD commands

SQL in R `dbGetQuery(con, "ALTER TABLE transactions ADD NewCol;")`
`dbGetQuery(con, "UPDATE transactions`
`SET NewCol=ROUND(Cost, 0);")`

2
In a second step, specify the values of the new column with the UPDATE & SET commands

Updating rows and columns: Adding columns to a table

Customer	TransDate	Quantity	PurchAmount	Cost
149332	15-11-05 00:00	1	199.95	107.00
172951	29-08-08 00:00	1	199.95	108.00
120621	19-10-07 00:00	1	99.95	49.00
149236	14-11-05 00:00	1	39.95	18.95
149236	12-06-07 00:00	1	79.95	35.00
...

Add column
NewCol

Customer	...	PurchAmount	Cost	NewCol
149332	...	199.95	107.00	107
172951	...	199.95	108.00	108
120621	...	99.95	49.00	49
149236	...	39.95	18.95	19
149236	...	79.95	35.00	35
...

R data.table `transactions[, NewCol := round(Cost)]`

1
First, add a new, empty column to the table with the ALTER TABLE & ADD commands

SQL in R `dbGetQuery(con, "ALTER TABLE transactions ADD NewCol;")`

`dbGetQuery(con, "UPDATE transactions
SET NewCol=ROUND(Cost, 0);")`

2
In a second step, specify the values of the new column with the UPDATE & SET commands
